DETAILED ACTION

Election/Restrictions

1. Examiner has reconsidered his requirement for restriction. Therefore the requirement for restriction is withdrawn and claims 1-14 are pending in this application.

Double Patenting

2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

3. Claims 8-14 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-6 of U.S. Patent No. 7,047,859.

Although the conflicting claims are not identical, they are not patentably distinct from each other because claims 1-6 of Patent No. 7,047,859 teach an apparatus for making a hole in the center of an optical recording medium which comprises: a) a jig for cutting a circular hole in the resin layer, b) a punching blade which punches from the second side and has a centering protrusion, and c) an ultrasonic generator which produces

vibrations which aid in the cutting process, and a control unit capable of performing the same functions.

4. Claims 8 and 9 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-8 of U.S. Patent No. 7,096,770. Although the conflicting claims are not identical, they are not patentably distinct from each other because claims 1-8 of Patent No. 7,096,770 teach an apparatus for making a hole in the center of an optical recording medium which comprises: a) a jig for cutting a circular hole in the resin layer to a depth equal to that of the resin layer, and b) a punching blade which punches the center hole from the side opposite that of the circular cut, and a control unit capable of performing the same functions.

Allowable Subject Matter

5. Claims 1-7 are allowed.

6. The following is a statement of reasons for the indication of allowable subject matter: The prior art fails to teach any apparatus or method which describes cutting/scoring a first layer of **resin** to a larger diameter than that of the hole to be punched from the opposite side of the optical recording media. Additionally Examiner determined that claims from Application 10/762,306 now US Patent No. 7,270,527, Application 10/786,005 now US Patent No. 7,047,859, or Application 10/762,305 now US Patent No. 7,096,770, which are the closest art (not prior art) related to this application, do not render the method claims of the instant application obvious and thus there is not an instance of obvious type double patenting in the present application.
